PROJECT SUMMARY

The Smart Lost & Found Management System is a ServiceNow-based enterprise application that automates the complete lifecycle of lost and found items.

The system combines centralized data management, role-based access control, workflow automation, custom user interfaces, and automated notifications to provide an efficient and structured lost-and-found management solution.

The core workflow of the application is:

LOST ITEM → FOUND ITEM → POTENTIAL MATCH → CLAIM → VERIFICATION → APPROVAL → RETURN → NOTIFICATION

The project demonstrates practical knowledge of ServiceNow application development and enterprise workflow automation and provides a foundation for future enhancements such as AI-powered matching, image recognition, analytics dashboards, mobile integration, and intelligent notifications.
